### SALE SCHEDULE:

Tuesday, 11/3/2020

- Cattle Available for Viewing

Wednesday, 11/4/2020

- 7:30 AM | Breakfast and Coffee Available
- 10:30 AM | Cowmaker Bull & Female Sale
- 11:30 AM | Lunch Available During the Sale

### SIGHT UNSEEN PURCHASE OPTION:

If you are unable to attend the auction in person, simply contact the AMS marketing team:

- Describe your selection criteria and the type of bull(s) you wish to purchase and your price range.
- You pay only the bid price, just as if you were bidding in person.
- We will call after the sale to confirm your purchase and you can confirm your payment method and arrange shipping.
- You decide if the animal meets your criteria upon delivery. If you are not happy with your purchase, you don't own it.

### TAKE NOTE:

Radale Tiner (979.492.2663) the regional manager for the American Angus Association for Texas & New Mexico has seen all of the bulls & females and will be glad to assist you. Wyman Poe (979.229.0722), Brett Sayre (573.881.1876), the sale managers & the ringmen will also be glad to assist you with your selection decisions.

### GENOMIC MARKER TEST:

Angus bulls and spring 2019 Angus heifers have been DNA tested with the Zoetis HD50K high density genomic marker test. Their EPDs have increased accuracy allowing you, the buyer, to make a more informed buying decision.

### VIDEOS OF SALE CATTLE:

Videos will be available to view at [www.amscattle.com](http://www.amscattle.com) by 10/21/2020.

### SALE ORDER AND SUPPLEMENT:

Sale order and sale supplement will be available at [www.amscattle.com](http://www.amscattle.com) prior to the sale.

# COWMAKER BULL & FEMALE SALE

# WELCOME!

On behalf of American Marketing Service, welcome to the Cowmaker Bull and Female Sale. It is a pleasure to work with this group of dedicated and progressive Angus and Brangus breeders.

Please note the new location. We think you will like the way we are able to display the cattle and the ease of loadout after your purchases are complete.

For the first time, Solid Rock Ranch will be offering a select set of registered Angus females. This is an added bonus and a feature you will appreciate. They will be mates to many of the bulls selling and they are a powerful yet practical set of yearling heifers straight from the heart of the Solid Rock herd. Many of the heifers will be selling as matched choice sets and Solid Rock will retain the heifer not selected in their program, that is how good they are. They are also offering a very complete set of young bred cows and pairs as well as 6 open commercial heifers.

In addition, we will host our annual Cowmaker bull sale. We will be selling 80 Angus and 13 Brangus and F1 Angus X Brahman bulls from Solid Rock Ranch, Vinson Ranches, and Schultz Cattle Co. These operations have teamed up to offer a highly complementary set of bulls with the best genetics the Angus and Brangus breeds can produce.

You will find a very useful set of bulls ready to work for you. The Angus genetics behind this offering is second to none. The sires are balanced trait herd sires that are highly proven. The dams represent some of the greatest sires of our time in their pedigree, and are real world working cows that make their living on forage.

The Angus bulls are well developed and powerful without being overly conditioned. They are big topped and thick with plenty of middle. Their EPDs and performance values are impeccable. You will find a high percentage of AI bred herd sire prospects, they are sired by DL Sonic 444, Buford Rebound C837, Buford Pathfinder C304, Connealy Black Granite, Coleman Charlo 0256, J&J Weigh Up 294, 3F Epic 4631, Bar R Jet Black 5063, S A V Resource 1441 and Tehama Bonanza E410.

The Brangus bulls also present cutting-edge genetics and big-time performance values. You will find AI and natural service herd sire prospects by Stonewall, Hollywood and Billy the Kid and by sons of 101 Ranger and Skyhawks Presidente and more. They represent a world of muscle, growth and carcass in very pleasing packages. You will find calving ease prospects as well as power bulls perfect to power up your cow herd and genetically compete in the pounds game while adding carcass quality. Like their Angus counterparts they are well conditioned and ready to work.

Please join us and these dedicated beef producers on Wednesday November 4th at 10:30 AM at the Stalwart Ranch Weaning Facilities located 3 miles west of Crockett, TX on Hwy 21 for our fourth annual sale, the Cowmaker Bull and Female Sale.

*Mark Cowan*

This sale will be broadcast live on the internet.

**DVAuction**  
Broadcasting Real-Time Auctions  
Real time bidding & proxy bidding available.

Buying online is as easy as 1, 2, 3...

1. Create an account at [www.dvauction.com](http://www.dvauction.com) under the "register" tab
2. Apply for bidding approval by clicking on the "details" tab at least 24 hours prior to the auction - a DV representative will notify you once you have been approved
3. Tune in for the sale and make your purchases!

After the sale, contact the sale manager or owner to arrange transportation and payment. High speed internet is required for successful bidding - be sure to check the lag-time monitor in the top left corner to ensure real-time broadcasts.

Proxy Bidding - if you can't make time to watch the sale, register a proxy bid and let our system represent your bid while you're away. Look for the "proxy bid" tab on the auction listing and fill in your maximum bids. We'll handle the rest!

Having Trouble?

During the auction, you can type a message to the operator at any time for assistance. Our full-time support team can also always be reached at (402) 474-5557.

## HERD HEALTH PROTOCOL

Boosters for clostridial (Ultrabac 8), respiratory & reproductive (Vira Shield 6 + VL5 HB) were given to Solid Rock Ranch bulls & heifers & they were dewormed with Cydectin Pour On in late September through mid-October. Breeding soundness evaluations (BSE) and Trichomoniasis (Trich) tests were performed in mid-October. Solid Rock Ranch bred cows/pairs were dewormed with Dectomax injectable in late Sept. through mid-October. Cows within 60 days of calving were given Ultrabac 8, Vira Shield 6 + VL5 HB Somnus & Scour Bos 9. Other breeders bulls also have been managed with good vaccination and deworming programs and have had breeding soundness evaluations (BSE) and Trichomoniasis (Trich) tests within 30 days of the sale.

**Thanks to all the businesses represented throughout the catalog whose excellent service, products and professional yet caring business practices are so helpful to us as we strive to produce bulls and females that will in turn benefit our customers.**

# ANGUS BULLS

Solid Rock Ranch | Franklin, TX

Welcome to the Cowmaker Bull & Female Sale being held Wednesday, November 4, 2020 at the Stalwart Ranch Weaning Facilities west of Crockett on Hwy 21. Solid Rock Ranch, Vinson Ranches & Schultz Cattle Co. invite you to carefully study the Angus and Brangus bulls selling. Foundation genetics are found throughout. Whether you are looking for elite herd sires with top of the breed EPDs for multiple traits, calving ease bulls to breed heifers to, balanced trait bulls or higher growth power bulls to use on cows, I think you will find bulls that fulfill those needs. Please feel free to contact the owners, the sale managers, ringmen, Radale Tiner, Wyman Poe or Brett Sayre with any questions you have and to assist you in your bull selection decisions. This year we have added internet bidding through DVAuction and you may also leave a bid with any of those listed above or be on the phone if you are unable to attend the sale.

Since 2001, Solid Rock Ranch has been focused on producing practical, functional, efficient Angus cattle that will work in the heat, humidity and relatively low quality forage environment of central Texas. While there are some bulls in this offering that are at the very top of the breed for multiple traits, the breeding program generation after generation is designed to provide balanced trait bulls to commercial and registered breeders alike that will produce those kinds of daughters for them that will excel in their herds. Our goal has been to produce bulls that will help you put the COW back in your cowherd and to produce very market accepted steer progeny as well. This year we are also offering all the spring 2019 Angus heifers and a group of young bred cows and pairs. Study the females to get an idea of what these bulls can do for you.

Calving ease, balanced EPD traits and functionality have been a consistent breeding objective in this cow herd from the start. The Angus breed has excellent carcass merit especially for marbling relative to most of the other beef breeds, so that has not received so much selection pressure that other

**Actual Birth Weight (Act Wt)** is the actual birth weight. EPDs for CED or BW are better indicators of calf birth weights than actual birth weight of the sire.

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Residual Average Daily Gain (RADG)**, feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

**Scrotal Circumference EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

**Docility (DOC)**, is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves.

**Heifer Pregnancy (HP)**, is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

**Calving Ease Maternal (CEM)**, is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Carcass Weight EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

characteristics such as adaptability, functionality, balanced performance, soundness, capacity, etc. have been compromised.

Sons and grandsons of proven and up and coming Cowmaker sires like DL Sonic 444, Buford Rebound C837, Buford Pathfinder C304, Connealy Black Granite, Coleman Charlo 0256, J&J Weigh Up 294, 3F Epic 4631, Bar R Jet Black 5063, S A V Resource 1441 and Tehama Bonanza E410 sell. Study the pedigrees closely, they are stacked with bulls designed to produce productive, big bodied females that will thrive on forage. The identification system here is a cow family numbering system with the family number first, a year letter code next and then the order they were born within that family in that year. For example, 335G would be the first animal born in the 335 family in 2019, 335G2 the 2nd, etc. The lots are arranged in brand order so the best lots are not necessarily the first few lots in the catalog.

All the Angus bulls selling are free either by pedigree or DNA test of the recessive genetic defects AM, NH, CA & DD. Angus EPDs and rankings are as of 10/2/20. Angus EPDs are genomic-enhanced (GE-EPDs). Bulls and heifers were tested with the Zoetis HD50K high density marker profile. They will be designated with a double helix DNA symbol above the CWT EPD.

Thanks for all the buyers in previous sales and those customers that have invested in Solid Rock Ranch genetics through the years either through private treaty sales or other sales. We think you will find Angus & Brangus bulls and Angus females in this offering that will benefit your breeding programs. We look forward to seeing you in Crockett on Wednesday, November 4, 2020.

*Matt Jones*

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Weaned Calf Value (\$W)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

**Beef Value (\$B)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

**Accuracy (ACC)**, is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

Powerful Resource son who packs a ton of performance in a medium frame package. His Really Windy dam is a picture perfect cow, angular and clean fronted with a beautiful udder. She always produces one of my top calves. Full brother to this lot was last year's high selling bull. Another full brother is destined to be one of the top bulls in next year's sale. I've been trying to make a sister but she keeps producing top end sons instead. She is bred back to Resource to calve this fall then we plan to flush her. The four females behind his dam have also all been donors and done an outstanding job. True maternal depth here. WW 10%, YW 15%, DOC 30%, CWT 35%, REA 20%.

Calving ease bull with added fertility and milk. The S Rock BlackJack 2243E2 progeny are very stylish with added muscle expression. This is the first of three sons to sell and three daughters also sell. Bred very similar to the previous lot, their great granddams are 3/4 sisters and dam's sire is the sire of the preceding lot. We try to offer the opportunity to put together groups of bulls with similar breeding, phenotype and genetic merit to assist our larger customers in producing a more uniform calf crop and subsequently a more uniform cowherd. His moderate and complete dam sells as lot 151, check her out. CED 4%, BW 15%, DOC 30%, HP 30%, CEM 15%, Milk 15%, \$W 35%.

One of a few sons to sell this year out of the 335C9, Basin Payweight 1682 son. 335C9's dam is one of three Lemmon Newsline x Deer Creek EXT 335 cows in the Solid Rock Ranch herd and all have done a really good job. This bull is another double bred 335 and he offers a spread of 1 to 99 from birth to yearling. Use him on heifers or cows. RADG 30%, SC 4%, CEM 35%, CWT 35%, \$B 20%.

# GRAHAM

## *Land & Cattle Co.*

GONZALES, TEXAS

Graham Land and Cattle Company is the leader in South Texas cattle feeding and investing. We have been producing high quality beef along with high quality service since 1987. Here at Graham Land and Cattle Company, we also offer three main investment programs that focus on diversification, resource utilization and risk management. These three programs revolve around "the landowner, investor, and producer."

- Retained Ownership Planning
- Heifer and Bull Development Program
- Customized Feeding Wagyu and Japanese Influence Cattle
- Age & Source / Non-hormone Feeding Available
- Specialized Feed By-Products
- 15,000 head Pasture Growing Program
- Cattle & Feed Financing
- Risk Management
- TCFA Beef Quality & Safety Assurance Certified

Dr. Charles W. Graham, DVM, Owner  
Tyler Graham, Owner  
Jay Gray, General Manager  
Maurice Janda, Feedyard Manager

64	8 .31	1 .52	56 .44	94 .36	0.2 .29	1.5 .38	17 .30	15 .19	9 .26	26 .28

Another calving ease prospect. His maternal granddam, a Bextor daughter, is the dam of the Final Answer son S Rock Best Answer 639Y that you will see in pedigrees of several lots throughout the sale. His daughters are a little more moderate, good fronted, big ribbed, square hipped and clean fronted. CED 35%, SC 15%, HP 10%, Milk 40%, \$W 30%.

# BRANGUS BULLS

Solid Rock Ranch | Franklin, Texas  
Vinson Ranches | Ovalo, Texas  
Schultz Cattle Co. | New Baden, Texas

We will again offer a select set of Brangus bulls this year in the Cowmaker Bull & Female Sale. We feel these bulls are highly complementary to the Angus bulls offered. They are from a long-time group of friends and Brangus breeders who share a similar breeding philosophy.

It would be challenging to find a set of Brangus bulls with more real world performance and carcass, in a more balanced EPD tabulation than the bulls representing these consignors. Please note the number of bulls that records 7, 8, 9 and more EPD traits ranking in the Brangus breed's top 35% or greater. That is the balance we feel is irreplaceable in the pasture.

You will find AI and ET herd sire prospects, including sons and grandsons of some of the most proven bulls in the breed. There are sons and grandsons of Stonewall of RRR 222W6, Hollywood of Salacoa 23A53, 101 Ranger 99W11, Skyhawks Presidente and more. They represent a world of muscle, growth and carcass in very pleasing and numerically balanced packages. Like their Angus counterparts they are well conditioned and ready to work. We are thankful for a quality set of bulls being offered by longtime fellow Texas breeders: Lanny Vinson with Vinson Ranches and Charles & Steve Schultz with Schultz Cattle Company. They have all been in the cattle business and raising Brangus cattle for many years and are diligent in their breeding programs and careful in their mating decisions.

This year we are again offering one special half-blood Brangus bull sired by the Brahman sire S Mr. Manso 338 (P). Solid Rock Ranch is actively involved in a new generation Brangus program to capitalize on their generations on balanced trait breeding program in their Angus herd with an emphasis on functionality, productivity, genetic merit and phenotype. Dams were selected from the top moderate birth weight cows in the Solid Rock Ranch herd. Heifer mates are in a breeding up program to introduce new genetics to the herd and to the Brangus breed. This half-blood bull has a lot of mating flexibility, whether he is used on half-blood cows to maintain Brahman influence or on higher percentage English or Continental cows to add a little more ear. He is registered with IBBA and calves out of registered Angus cows are eligible for registration as one-quarter bloods. Subsequent mating to a half-blood will result in first generation registered three-eighths blood Brangus.

We think you could drive the wheels off your truck and not find a superior set of real-world herd sire prospects than the Brangus bulls offered in the Cowmaker Bull Sale. They have a lot to offer.

*Mark Cowan*

## USING EPDS FOR SELECTION

Cattle Evaluations use the term Expected Progeny Differences (EPD) to express genetic transmitting ability of a sire for the various traits listed. An EPD is a prediction of how future progeny of a sire are expected to perform in a particular trait relative to other sires in the analysis. The key word is "difference". The EPD itself does not imply "good" or "bad" performance. But rather, the EPD gives a prediction of the average difference to expect in the performance of a sire's progeny relative to other sires in the same analysis.

The EPD for a given trait on each animal in the analysis is compared to every other animal in the analysis. The EPD is reported as a plus or minus value in the unit which the trait is measured.

Each EPD reported is accompanied with an Accuracy (ACC) value. ACC is a measure of reliability regarding the EPD evaluation for a performance trait. Accuracy is reported as a decimal number between zero and one; large values indicate greater accuracy and more certainty the EPD will show little change as additional progeny information is obtained.

**Actual Birth Weight (Act Wt)**, Is the actual birth weight. EPDs for CED or BW are better indicators of calf birth weights than actual birth weight of the sire.

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Scrotal Circumference EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

**Heifer Pregnancy (HP)**, is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

**Stayability (STAY)**, Predicts the likelihood an animal's daughters will still be in the herd at six years old versus the average of the breed.

**Calving Ease Maternal (CEM)**, is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Intramuscular Fat (IMF)**, Percent intramuscular fat is highly correlated to the USDA marbling score. Expressed as a difference in percent IMF of a sire's progeny compared to progeny of other sires.

**Fertility Index** | The IBBA fertility index includes considerations for Heifer Pregnancy (HP), Stayability (STAY), Cow Weight (CowWt), Age at First Calving (AFC) and ultrasound Scan Fat (SFat). As one would expect, the index value goes up as HP and STAY increase. Conversely, the index value goes down as CowWt and AFC increase.

The fertility index is structured so that if you select bulls with high index values, your mature cow weights should not increase, but your weaning weights and yearling weights would increase. In other words, you will tend to select earlier maturing cattle with rapid early growth. The heifers will reach puberty sooner and at a lower weight, and are expected to be fertile and stay in the herd longer.

**Terminal Index** | The Terminal Index is very straightforward. The most impactful trait is yearling weight, followed by weaning weight and IMF (i.e. marbling). If one selects aggressively using the Terminal Index, it will tend to push cow weights higher over time.

**Accuracy (ACC)**, is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

# HALF-BLOOD BULL: MAXIMIZER

In the spring of 2017, Solid Rock Ranch set aside a select group of top end, moderate birthweight, proven cows as a base for a new genetics Brangus program to complement the existing Brangus genetics in the herd and in the breed. After careful study and consultation we selected two Brahman sires to use that first breeding season: Mr. V8 259/7 and JDH Mr Ruben Manso 549/1. This first cross produced the six half-blood Brangus bulls that were sold in the 2019 Cowmaker sale and three heifer mates retained in the Solid Rock Ranch herd to produce the next generation. The next year, in an effort to produce a higher percent of heifers, sexed semen was used in ET and a limited number of some of the best cows were bred AI with unsexed semen. This resulted in several half-blood females and only one half-blood bull to offer you this year, but he is plenty good. We call these half-blood bulls and heifers "Maximizers" because of the advantage in heterosis they can provide and the ability to add or maintain some ear in those herds looking for that. The bulls themselves should also have an advantage in adaptability when used in more extreme hot &/or humid environments. Their calves out of registered Angus or Brahman cows are eligible for registry with IBBA as one-quarter or three-quarter bloods respectively.

# ANGUS FEMALES

Solid Rock Ranch | Franklin, TX

Welcome to the female portion of the 2020 Cowmaker Bull & Female Sale. This is our fourth bull sale, but this is the first year we have included females in the sale. The females offered as well as the bulls are a reflection of the breeding program and philosophy at Solid Rock Ranch. From the beginning we have focused on producing practical, functional, balanced trait females and bulls with capacity and dimension in a phenotypically pleasing package. As I stated in the bull intro., the Angus breed has plenty of marbling but some of those other traits have sometimes been overlooked so we have avoided chasing marbling and other traits to an extreme. We still include all of the traits in our sire selection decisions but strive to use those sires that we feel like will give us the best chance to produce that optimal female who will work in our environment and under our management system. Balanced traits with functionality, structural soundness, udder quality, capacity and an attractive phenotype in a female that will be able to breed and raise a good calf are the objectives we have bred for from day one. We spend a lot of time and place a lot of emphasis on sire selection seeking those bulls that we feel like will help us produce that type of female as well as the bull mates that will work in the commercial cow-calf herd. We also have a clear understanding that our overall roll in the seedstock industry is to produce bulls that will help our commercial cow-calf customers be profitable. They need replacement females that will perform in their herds and steer progeny that will be in demand. With this in mind, we select AI sires that match our objectives utilizing proven sires and sampling some younger sires that we believe have the potential to complement our cow herd. We study pedigrees and EPDs but also seek the opinion of others we trust that have seen the bulls and/or progeny and who may have a better familiarity with some of the animals back in the pedigrees and some of their strengths and weaknesses.

The Solid Rock Ranch cow herd is built around several cow families that originated with a carefully selected group of foundation females purchased mostly in 2001 with a few additional females added the next few years. These foundation females were the result of programs like Partisover Ranch/Spur Ranch (308 family), Gardiner Angus (335 family) R A Brown Ranch (639 & 4545 families), Fink (769 and 1993 families), Ohlde Cattle Company (824

and 846 families), Jorgensen Ranches (2243 family), Hinman Angus (3114 family), Ellis Angus Farms (3931 family), McCurry Brothers (4876 family), Thomas Angus Ranch (4440 family), Drake Farms (5028 family) and Shamrock Vale Farms (6001 and 6034 families). These foundation females were carefully selected with the same criteria being used in our breeding program today and provided a solid, proven maternal base cow herd.

We are excited to offer you the opportunity to tap into these carefully propagated genetics. This is our first public female offering of any size in 10 years. We are now at a point where we should be able to make this an annual event like the bull sale. Females in this sale include all of our spring 2019 Angus heifers. These heifers have intentionally been held open to breed to calve at around 2 ½ years. We have shifted to a later first calf in an effort to better match our feed resources and even more importantly to give that heifer a much better opportunity to calve, raise a good first calf and breed back without having to feed them an excessive amount of feed to maintain condition as they are typically losing teeth around 2 years and still growing. These heifers are really a good set with several that are exceptional. We will be offering some of them as choice lots allowing the buyer the opportunity to pick from the very top of the herd and still allowing us to retain top genetics to continue to advance our program. We are also offering a top set of young bred females and pairs. A few will have calves at side at the sale and most will be due the next few months. Many have sons or daughters selling in this sale and they are noted in the footnotes. Check out their progeny to see the potential they have to add to your program.

Thanks for your consideration of this offering. We are in a new location that will give you a good opportunity to appraise the cattle. It is very accessible and we will have trucking available as needed. For the first time we have also added the opportunity to view and bid online on DVAuction if you cannot make it to the sale. Please feel free to call me, the sale managers, Radale, Wyman or Brett if you have any questions. We are here to help.

*Matt Jones*

# SALE TERMS & CONDITIONS

## BIDDING

Each animal will be sold to the highest bidder without reserve. The auctioneer will settle any disputes as to bids and his decision on such matters shall be final.

## TERMS

Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the seller to see that animals are fed and cared for until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner. After 48 hours a maintenance fee of \$5.00 per day will be assessed until pickup, unless AMS arranges shipment.

## CERTIFICATE OF REGISTRY

A transferred certificate of registry will be furnished to the purchaser for each registered bull or registered female once proper settlement has been made.

## RETAINED INTEREST

Seller is retaining 1/3 semen interest on all registered Angus bulls unless otherwise noted. Buyer has full possession and full salvage value. In the event the seller wishes to collect semen, buyer may participate in the collection and share expenses or seller will own the whole collection at seller's expense. Collection will be at the buyer's convenience.

## HEALTH

Health papers suitable for interstate shipment will be furnished on all animals.

## ANNOUNCEMENTS

Any changes from the information of any kind in this catalog will be provided in a sale day supplement sheet or announced from the auction block and such information shall take precedence over cataloged information.

## BREEDING GUARANTEE

1. All animals are guaranteed to be breeders with the exception of: a) calves under 12 months of age; b) animals shown by purchaser after sale in which the guarantee (if any) shall be between the seller and the buyer; c) injury or disease occurring after the sale; d) gross negligence or willful misconduct on the part of the purchaser; e) death by any reason.
2. Any bull which settles cows by natural service and passes a fertility test made by competent veterinarians, mutually agreed upon by the buyer and seller, during any six month period of trial (provided for in paragraph 2 of the section of these sales terms and conditions entitled "Options and Privileges of Return or Adjustment") shall be considered a breeder.
3. Safe in calf females have been examined by competent personnel and are so guaranteed. Exposed females have been exposed but are not guaranteed to be safe in calf. Open females have not been served and are so guaranteed.

## PREGNANCY DETERMINATION

The females in this sale noted safe in calf have been determined pregnant by physical palpation. Our best estimate of service sire & expected calving date will be given in the case of the females with both an A.I. sire and a natural breeding sire.

## OPTIONS AND PRIVILEGES OF RETURN OR ADJUSTMENT

1. All claims for adjustment or refund must be made in writing within six months of the sale date.
2. In the event an animal is claimed to be a non-breeder, the animal may be returned to the seller if in good condition and complying with the health requirements of Texas. The seller shall be entitled to a six month trial following the return of the animal in which to prove that the animal is a breeder. If at the end of six months the seller is unable to prove the animal is a breeder, the seller shall at the option of the buyer replace the animal with another of equal value or issue a credit for the initial selling price. If the seller proves the animal to be a breeder, it shall be the obligation of the purchaser to take delivery of the animal and pay all expenses incurred for transportation.
3. If a bull is sold and at a later date proves not to be eligible for registration under association rules, the seller shall be obligated to make a satisfactory adjustment on the purchase price to the buyer, refund the purchase price or issue a credit for the initial selling price upon the return of the animal to the farm of the seller.
4. If an animal is sold and through DNA is proven to have incorrect parentage as represented by the certificate of registration, and for which the parentage can be determined, the seller shall be obligated to make a satisfactory adjustment on the purchase price to the buyer, refund the purchase price or issue a credit for the initial selling price upon the return of the animal to the farm of the seller.

## RIGHTS AND OBLIGATIONS

1. The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding on both. Other than the guarantees and warranties stated above, no other warranties or guarantees are expressed or implied. Each sale or resale of an animal constitutes a separate transaction.
2. American Marketing Service or any other person connected with the management of the sale assumes no liability, legal or otherwise.
